Catch application mistakes before they reach your team

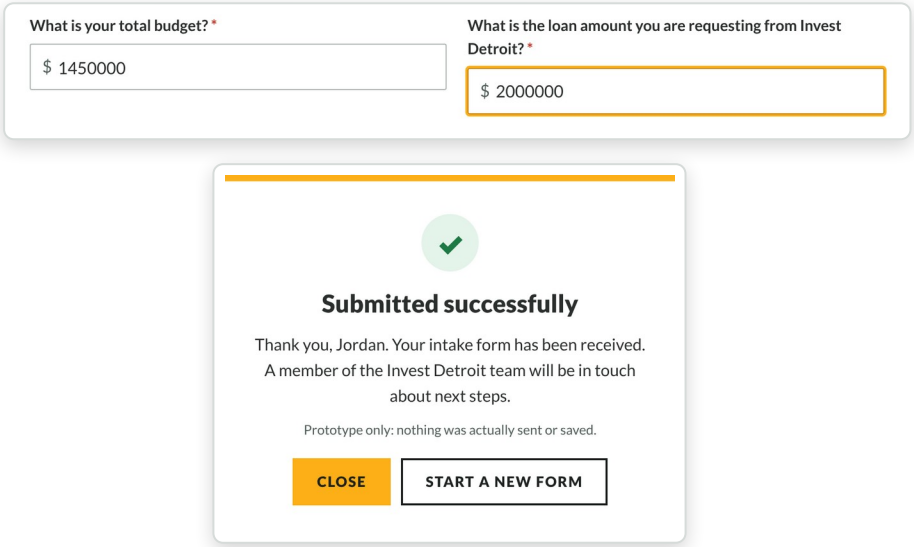

An AI Application Copilot for the Real Estate/C&I In-Take Form

[Team name] · Ross School of Business · [Date]

Today: mistakes are found too late

TODAY

Same example: a $2M loan on a $1.45M budget is accepted without a warning.

A long form with no save

48 required answers, and leaving the page loses everything.

Mismatches go through

It only checks blanks and formats, so numbers that contradict each other aren't caught.

Staff find the gaps later

Missing or unclear answers mean follow-up emails before screening can start.

Who it’s for

Applicants

- Developers and business owners applying for Real Estate or C&I financing
- First-time and emerging developers who are new to lending terms
- Applicants more comfortable in Spanish, Arabic, Bengali or Chinese

Invest Detroit lending staff

- The team that screens new intake forms
- Receives applications with fewer gaps and contradictions
- Sees an applicant’s note when a flagged answer is actually correct

How it works, in four steps

1. Prepare

“Before you start” lists the 3 documents and numbers to gather.

2. Fill in

Each answer is checked as you leave it; ? explains any question.

3. Review

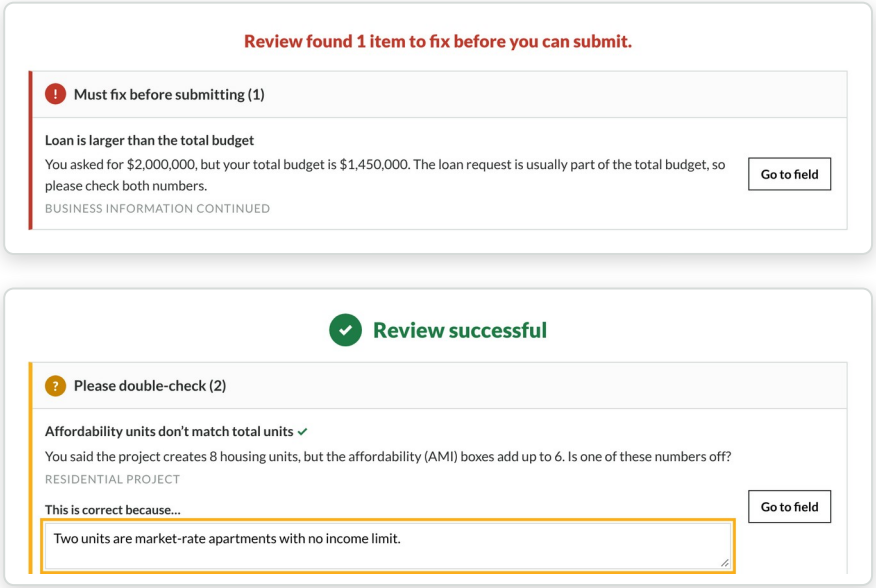

One button checks everything. Fix it, or explain why it’s right.

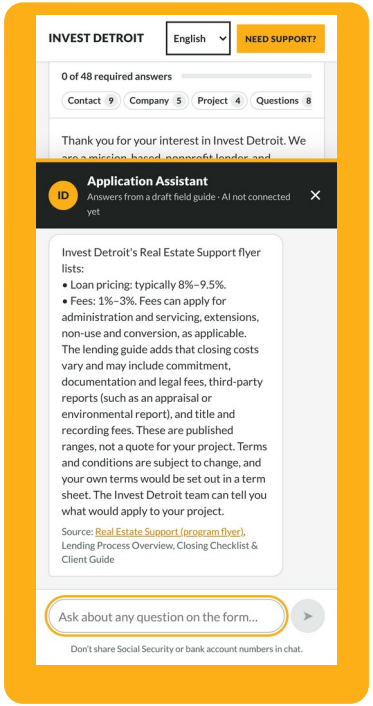

4. Submit

Unlocks after a successful review, then shows what happens next.

The review is fixed rules and math: the same answer every time. Only the chat uses AI (Claude), and Invest Detroit facts come only from your documents, with the source named. It installs as an add-on to your FormAssembly page; the form itself is unchanged.

Live demo: one application

What we'll show

1. Sample applicant with 2 mistakes
2. Review catches them; fix one
3. Explain the other in one sentence
4. Ask the assistant a question
5. Submit: what staff receive

Test results: 42 of 43 examples

42/43

examples correct, expected answers written before each run

Main miss: “My ZIP is 48212, does that mean I’m in Detroit?” gets “tell me more” instead of the city-limits help.

Kind of example	Examples	Correct
Normal: common mistakes and questions	15	**15**
Tricky: other languages, vague or unusual wording	14	**13**
Must Never: approval, cheating, SSN, prompt tricks, off-topic	14	**14**

How we got there

- First run: 28/30. It missed “make my revenue look higher” and gave Real Estate rates to a Small Business question.
- We fixed both, then added 7 fresh examples we didn’t tune on: 42/43.
- Chat rows use the built-in guide; rerun with Claude connected (one command).

Mistakes caught before submitting

2/10

caught by today's form

10/10

caught with the copilot

Same example application, one mistake each	Today	Copilot
Required question left blank (job title)	✓	✓
Email address mistyped	✓	✓
Loan request larger than the total budget	—	✓
Total budget missing zeros ($1,450)	—	✓
Affordable-unit counts don't add up to housing units	—	✓
Net square footage entered larger than gross	—	✓
"Yes" to 10% equity, but the loan is 95% of the budget	—	✓
Owner counts don't match number of owners	—	✓
Mixed-use project with the office section left blank	—	✓
One-line executive summary	—	✓

Measured by running the same 10 example applications through the official form's own Submit checks (as copied in our replica) and through the copilot. Each example has one mistake taken from our field guide's common mistakes; how often each happens in real applications isn't known yet.

What it can’t do (yet)

Decide approval or eligibility

It never predicts approval, eligibility or a borrower’s rate. Staff decide.

Confirm Detroit city limits

Our one test miss: a ZIP-code question got “tell me more”. Use the City’s Parcel Viewer.

Understand every wording

Without Claude it matches known phrases. The first run missed two wordings (now fixed).

Read uploaded documents

Files are checked by name and size only, by design, for privacy.

Replace a translator

Translations were drafted with AI and need review. Chat answers are English until Claude is on.

Stay current on its own

Rates are copies of your flyers; update them when a flyer changes. Tested on sample data only.

Recommendation: a 30-day trial

1

Who and what

Real Estate screening staff and every applicant on the Need Support page, for 30 days, with the add-on on the live form.

2

How we'll know it works

Follow-up emails per application and applications needing fixes, before vs. during the trial; star ratings on /insights.

3

Before it starts

Staff confirm the facts; your web team approves the one-line add-on; the test set is rerun with Claude (keep 42/43 or better).

4

What it takes to keep

Your own Anthropic and Render accounts (about $25–$60 a month, estimated) and a named owner, about 1 hour a week.

Thank you
