AI Application Copilot

Helping Detroit developers submit complete, accurate Invest Detroit loan applications

[Team name] · Ross School of Business · [Date]

Today

01

The problem

Why applications come back incomplete

02

What we built

Review, assistant, languages, easier filling

03

How it works

The applicant journey, start to finish

04

What’s next

Roadmap and what we need to go live

Good projects, incomplete forms

A long form with no save

48 required answers across many sections, and closing the page loses everything.

Easy-to-miss mistakes

A loan bigger than the budget, AMI units that don’t add up, net and gross swapped.

Back-and-forth with staff

Missing or unclear answers surface after submitting, so screening starts with emails.

01

What we built

A copilot that sits on the existing intake form

Four ways the copilot helps

Review My Application

Catches blanks, typos and numbers that don’t fit before Submit unlocks.

Application assistant

Plain-language answers from Invest Detroit’s own documents, with sources.

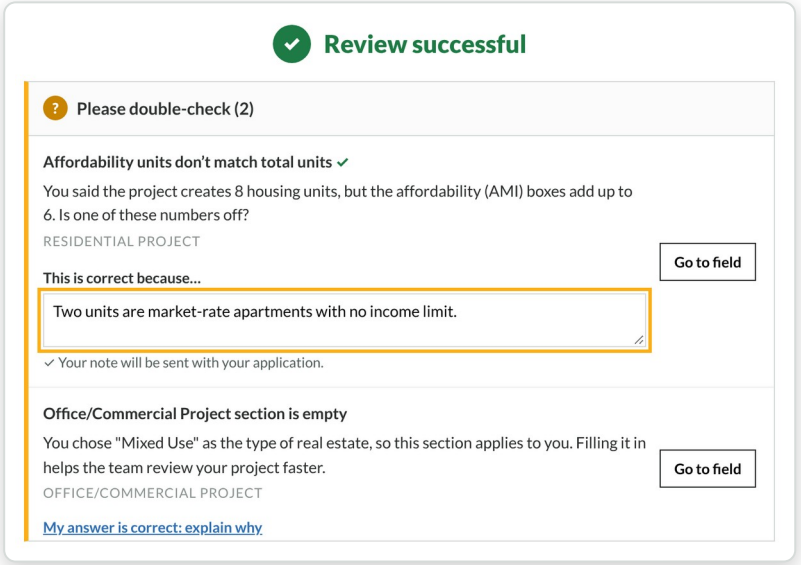

Five languages

English, Spanish, Arabic, Bengali and Chinese, including right-to-left.

Easier form filling

Live checks, progress by section, money formatting and upload tips.

Review before submitting, not after

Grouped by urgency

“Must fix”, “Please double-check” and “Good to know”, each with Go to field.

Explain instead of change

If an answer is right, a short note goes in with the application.

Submit unlocks on success

Only clear errors block. Tips never do.

Mistakes caught as you type

Money that reads clearly

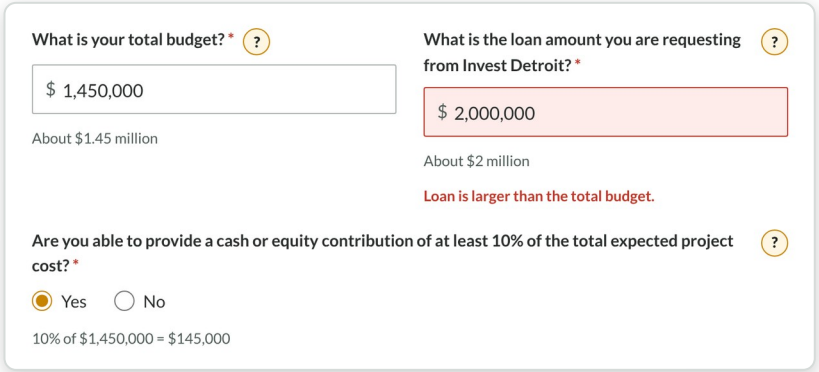

1450000 becomes 1,450,000, with “About $1.45 million” underneath.

The 10% equity math

“10% of $1,450,000 = $145,000” sits next to the yes/no question.

Checked as you go

A loan bigger than the budget is flagged right away.

An assistant that knows its limits

Answers from Invest Detroit’s documents

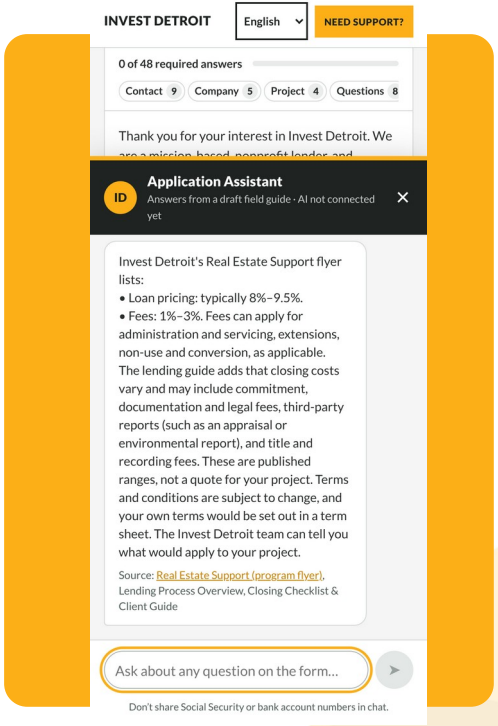

Flyers, lending guide and official sources, always named.

Never predicts approval

Published rates are quoted as “subject to change”. Decisions stay with staff.

Guardrails built in

Stays on topic, won’t help falsify answers, hides Social Security numbers.

Built to be trusted

160

automated tests on every change

~80

help entries from Invest Detroit sources

5

languages, every screen translated

0

applicant files opened or stored

Update these numbers before presenting.

02

How it works

The applicant journey, from first visit to first call

The applicant journey

1. Prepare

“Before you start” list of documents and numbers

2. Fill in

Live checks, progress bar, ? help on every question

3. Review

One button checks everything; explain or fix

4. Submit

Unlocks after a successful review

5. What’s next

Screening 1–2 weeks, then term sheet and closing

Timeline stages from Invest Detroit’s lending guide; every project is different.

Roadmap

Now

- Prototype live on a test link
- Knowledge base drafted from 4 documents
- Add-on built for the real form

Next

- Invest Detroit reviews facts and translations
- Install the add-on on the live page
- Notes field added to FormAssembly

Later

- Connect an approved AI model
- Staff-owned facts sheet
- Measure fewer incomplete applications
